PROJECTS

GeoRythum— Modern content-focused web platform [↗website](#)

UX/UI Design Case Study • 2026

- Designed a content-focused web platform for exploring and consuming complex geopolitical information.
- Developed information architecture and content hierarchy to improve readability and content discovery.
- Created responsive wireframes, high-fidelity interfaces, and interactive prototypes using Figma.
- Established a visual language and reusable UI patterns for a consistent editorial experience.

GALO - Privacy-First Memory Vault & Time Capsule App [↗website](#)

UX/UI Design Case Study • 2026

- Designed a mobile-first memory vault experience for preserving personal moments through private digital time capsules.
- Structured user flows for creating, organizing, revisiting, and managing stored memories.
- Developed high-fidelity interfaces, reusable components, and interactive prototypes in Figma.
- Iterated on navigation, information hierarchy, and interaction patterns to improve clarity and ease of use.
